

Zixi zRamp Broadcaster

Broadcaster server

The CONNECTED CAM zRamp Broadcaster, powered by Zixi, is the centerpiece for high quality IP video over the internet. This Broadcaster server receives streams from CONNECTED CAM and ProHD cameras and delivers them to decoders and content delivery (CDN) ingest points.

zRamp Broadcaster includes a wide array of video processing features, including transcoding, time shifting, VoD playout, recording functionality and stream switching. Its friendly web interface simplifies management of multiple sources and stream destinations while providing advanced content-aware correction compatible with Zixi-enabled JVC cameras.

KEY FEATURES

- Matrix routing – up to four inputs and outputs, depending on available bandwidth, output formats and zRamp model
- Accepts multiple input streams from CONNECTED CAM and ProHD camcorders.
- Multiple stream output (MPEG-TS, MP4, HLS, HDS, and MPEG-DASH)
- Provides real time transcoding on output
- Recording – VOD, Time Shift
- Friendly, robust web user interface
- Robust ARQ and Forward Error Correction
- One-click camera control
- Lifetime licence

Optimal streaming services, with PEPLINK unbreakable internet connections and JVC BR-DE900 streaming decoder

zRAMP models

- ZIXI zRAMP 4 in/out channel streaming management box
- ZIXI zRAMP 2 in/out channel streaming management box
