With the newly developed “Ring port structure”, the high sound quality available from digital audio can be fully realised, from powerful bass to the subtle high frequencies.

RING PORT STRUCTURE

With a ring port structure's sound ports located in a circle behind the driver unit, the sound pressure in headphone housing is equalised, realising stable amplification in the unit as a whole.

SOUND-INSULATING EAR PADS

Provide excellent sound insulation along with a comfortable fit

OFC CORD

Minimises the transmission loss with pure copper wire

Package Design

Concept

Full-size headphones with high-quality dynamic sound and optimum comfort

Main Features

- High-quality dynamic sound reproduction with 50mm Neodymium driver unit and two types of superior sound structure
- Ring port structure provides high-quality dynamic sound (please refer to page 42)
- Acoustic lens structure reproduces natural sound through two pieces of specially-engineered acoustic lenses
- Acoustic lenses (located in front of diaphragm) tune direct and indirect sound by subtly offsetting holes in each lens
- Wide head pad and soft ear pads for optimum comfort
- 3.5m pure copper cord for minimisation of transmission loss with gold-plated plug
- 6.3mm plug adaptor included

Special technology for HA-NC250

JVC

Technology to block noise

Sound-insulating ear pads

Soft memory foam cushions with extremely smooth surface ear pads that fit exactly on your ears create a seal to block background noise.

Dual housing structure

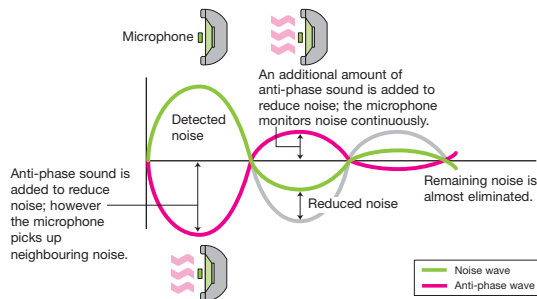

Dual acoustic wall blocks incoming background noise.

Technology to reduce noise

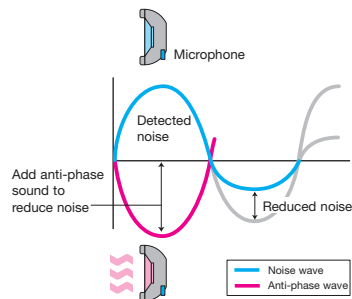

Equipped with advanced noise cancellation technology

Even after reducing background noise, some will remain. A microphone close to the driver unit picks up such remaining noise and the feedback circuit produces the appropriate amount of additional anti-phase sound. Every nuance of audio becomes clear through this feedback technology.

• Advanced noise cancelling with “feedback technology”

• Standard noise cancelling
